

Ceiling Elements

Chemcrest's decorative ceiling elements include rosettes, medallions and now our new ceiling dome. Made from high density polyurethane, Chemcrest's rosettes and medallions are lightweight and easy to handle and install. Crown a dining room or foyer with a highly detailed Chemcrest medallion. Or adorn a ceiling or fireplace surround with a well placed rosette. And Chemcrest's new fiberglass dome ensures a grand statement with or without a lighting fixture.

Consider adding a matching crown mold to further enhance your room decor. Suggestions for matching moldings are provided - or reference Chemcrest's extensive Moldings Catalogue.

Or don't use our medallions on the ceiling at all!! Our customers are always coming up with creative applications such as using a large medallion as a headboard or cutting a medallion in half to use as a decoration over a door or window.

Whatever your application, Chemcrest has a beautiful, highly detailed medallion to suit your needs and fulfill your dreams.

Medallion Installation Instructions

Step 1:

Disconnect and remove light fixture before installing medallion over an existing fixture. Ensure electricity at fuse or circuit box is turned off before installing.

Step 2:

Drill center hole of medallion to allow wires to slip through for the connecting of light fixture to power source. Make sure hole is no larger than canopy cover. (You can also order your medallion pre-drilled from the factory by specifying size of center hole with your order - additional charges will apply).

Step 3:

Slip wires through medallion center-hole with canopy and ring loose.

Step 4:

Connect fixture wires to power source. Slide medallion, canopy cover and ring up towards the ceiling. Tighten ring snug against medallion.

Step 5:

Use finishing nails or screws on the edges of the medallion in order that the medallion is flush all around the perimeter. The ring is the support for the fixture. The medallion should not be the support for the fixture. Chemcrest recommends not using adhesives in order that you may gain access to the electrical box in the future.

Step 6:

Counter sink finishing nails and fill holes with wood filler.

Step 7:

Paint medallion using a high quality latex or oil base paint.

The size of a ceiling medallion may be determined by multiplying the length of your room (in feet) by the width of the room and dividing by 7. This gives you a suggestion for the dimensions in inches of a well proportioned medallion.

Example: A 12' x 14' dining room could easily carry off a 24" medallion. ($12' \times 14' = 168'$; $168' / 7 = 24'$)

The calculation does suggest that a larger medallion tends to work better in most rooms. Smaller medallions tend to get lost in larger rooms whereas larger medallions beautifully crown a lighting fixture.

New from Chemcrest - Fiberglass Ceiling Dome

Chemcrest's new dome is constructed of highly durable fiberglass with a convenient fiberglass lip through which to mechanically fasten the dome to the ceiling structure. Four beautiful decorative rings are available to choose from which are pre-routed to fit over the lip to cover all screws and to cleanly finish off the installation.

The dome may be painted or left as is - and it can be used alone as a decorative statement or fitted with a lighting fixture.
